

HOLLAND

— BAR STOOL —

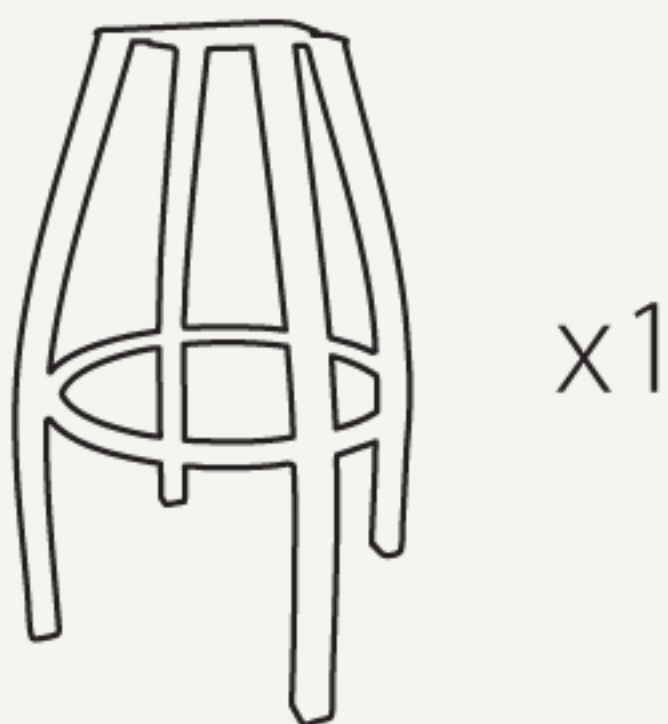

Bar Stool Assembly

In The Box (Parts)

Bucket with Seat & Swivel

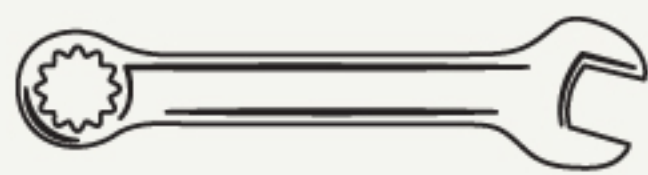

Base with Welded Top Plate

Bolts & Nuts

Tools Needed

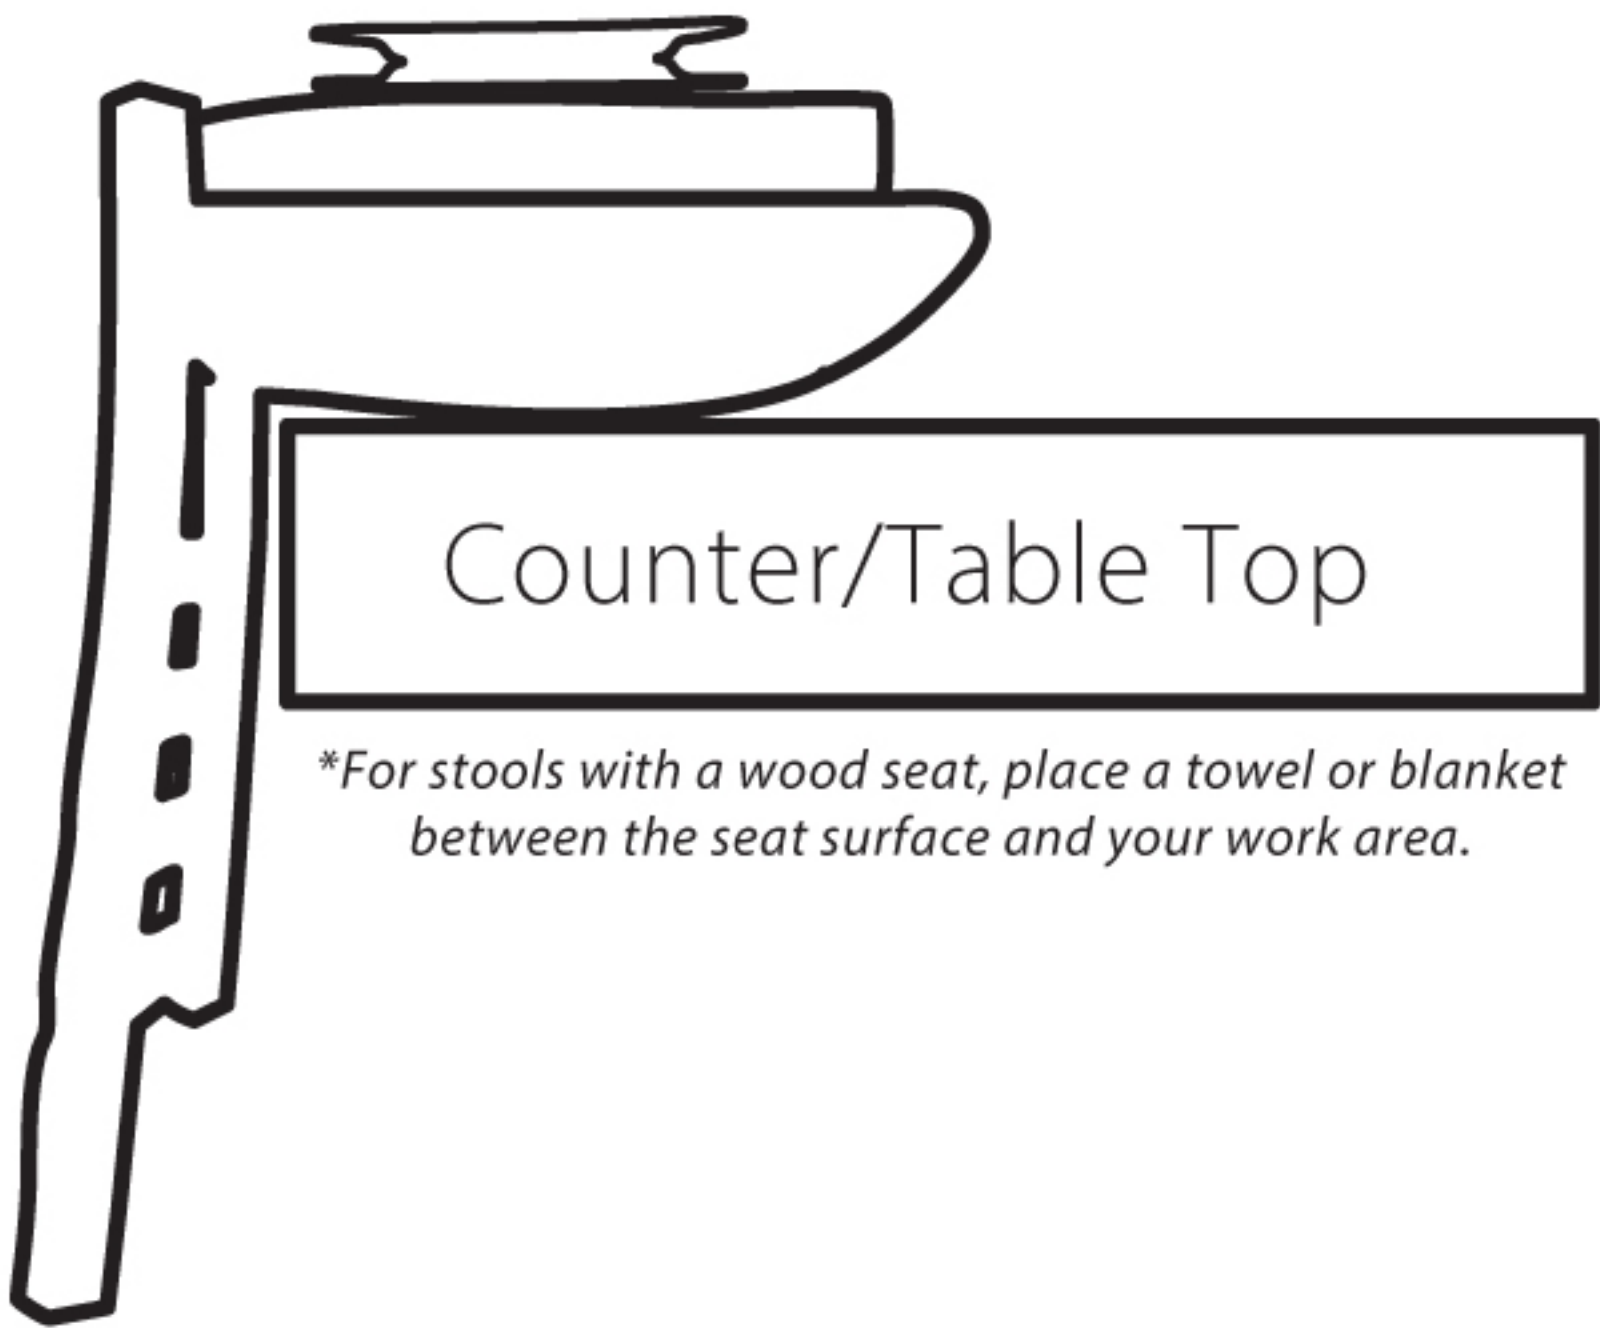

7/16 Wrench

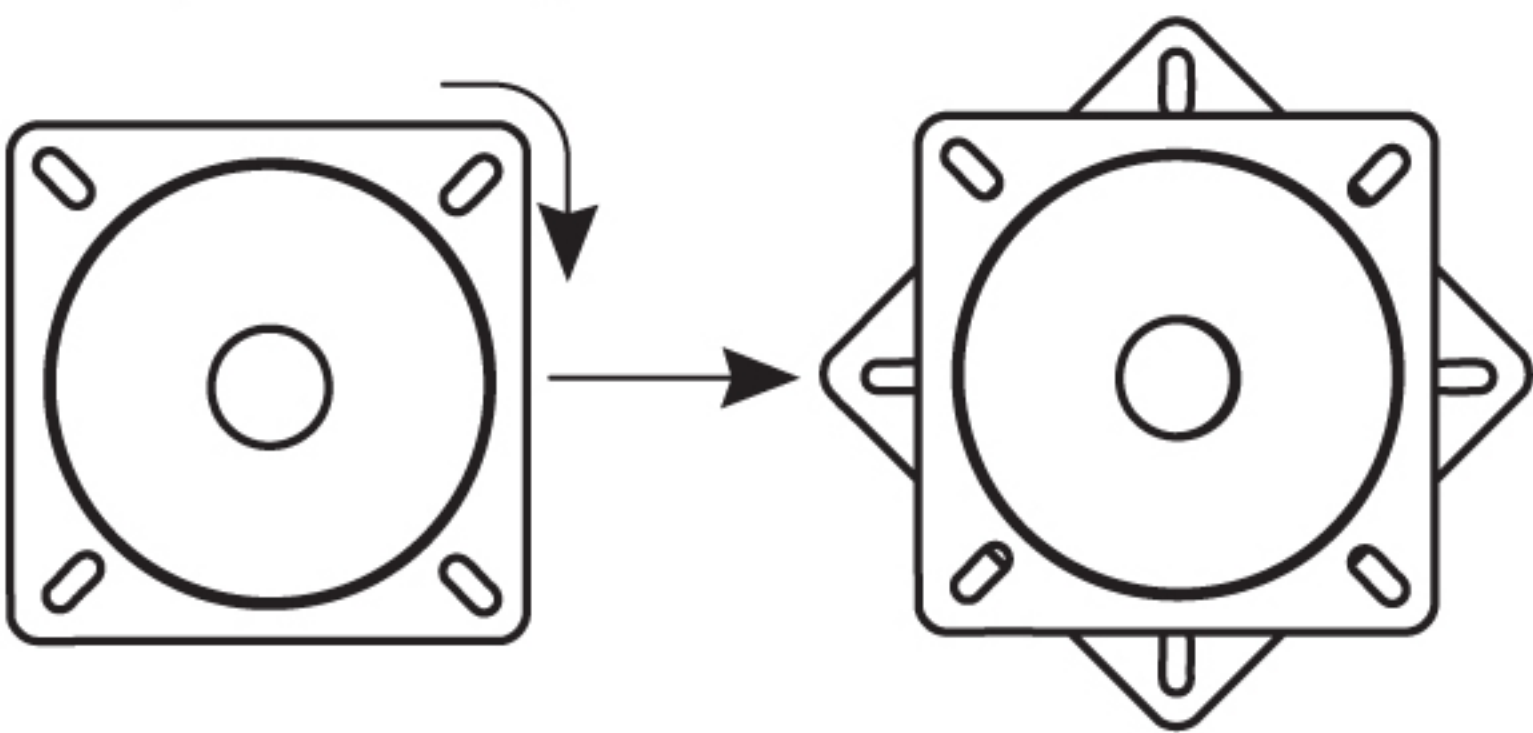

Crescent Wrench

① Place the bucket upside down on a sturdy, flat surface.

② Using firm, steady pressure, rotate the swivel approximately 45 degrees.

Note: Memory swivels require more force to rotate and will return to their original position when released.

③ Place the base upside down. Align the holes on the top plate with the holes on the swivel. Insert the bolts one at a time through the top plate, then thread each bolt with a nut and tighten securely.
